

ZERO-STAGE VISUALIZATION FOR PREMIUM
SPIRITS

2026

V10 LIQUID ENGINEERING

Proudly Presented:

GORAN DAMNJANOVIC

BEYOND THE PHYSICAL LENS

Capturing premium beverages requires heavy studio setups, temperature control, and endless takes. The laws of physics limit what you can shoot. We bypass physical cameras entirely. We rewrite the thermodynamics of glass and liquid.

PHYSICAL LIMITATIONS: Ice melts. Condensation is faked with glycerin.
Perfect takes are ruined by temperature.

OPTICAL NOISE: Glass acts as an uncontrollable mirror, capturing studio lights and uninvited reflections.

POST-PRODUCTION HELL: Weeks of cleaning up messy physical FX and unwanted glare.

ENGINEERED THERMODYNAMICS

V10 ARCHITECTURE SIMULATES PHYSICAL FORCES MATHEMATICALLY. WE CONTROL MICRO-CONDENSATION, ICE CRYSTALLIZATION, AND LIGHT REFRACTION AT THE PIXEL LEVEL, RENDERING FLAWLESS CINEMATIC MACRO DETAILS THAT DEFY REALITY. ZERO UNWANTED REFLECTIONS

DOWNLOAD RAW 150MP SAMPLE

FULL SPECTRUM CONTROL

Amber Precision: Flawless crystal rendering and warm volumetric light.

Crystal Clarity: Pure glass without studio glare.

From the warm volumetric refraction of an aged amber spirit to the pristine, diamond-sharp clarity of micro-condensation. We deliver impossible optical assets that dominate global digital campaigns.
